*The Only Catalog of its Kind*

## PELETT CLOVER (*Trifolium ambiguum*)

Known as Pellett Clover, Kura Clover and Honey Clover.

**AN UNUSUAL CLOVER WHICH ACTUALLY SPREADS** by underground stems. **STOPS EROSION**—a good honey plant.

**THIS VERY UNUSUAL CLOVER** spreads from rhizomous roots, and unlike most clovers, increases from year to year. It has the advantage of reproducing itself by both rootstocks and forming seed. Trials in situations favorable to it have demonstrated unusual potentials of this plant. The surprising behavior of this plant is the way in which the roots branch and rebranch, repeatedly sending new leaves to the surface. Root branches cut off and reset, grow vigorously and the new plants spread in similar manner.

**FILLS IN A HURRY**—rows planted 3½ to 4 feet apart in April using root divisions have spread to fill the spaces originally between the rows in a little more than a year's time; producing a medium growth of forage and one of the most abundant root systems of any plant we have ever seen; a perennial legume with many possibilities for use in binding soil against erosion. A plot which is ten years old and has maintained a thick stand through the years demonstrates the potential long life. The plant shows much winter-hardiness and a type of root system which is not subject to winter heaving as are some tap rooted plants.

*Abundant root system of Pellett Clover as removed from the soil.*

Pellett Clover blooms in June and July with corolla tubes such that the nectar is readily accessible to honey bees. We have observed honey bees usually visit the

flowers freely during the extended blooming period. Studies have indicated a nectar relatively high in sugar content.

*Flowers Nearly White but as Large as  
Red Clover Blossoms*

Seed is not available.

We furnish strong root divisions for trial plantings, well packed for shipping:

25 (minimum shipment) for \$2.00; 50 for \$3.25; 100 for \$5.00; 250 for \$10.00; 500 for \$18.00; postpaid.

NITRAGIN inoculant for Pellett Clover, 1 bu. size, each 65c. If inoculant is ordered separately, add 25c to cover mailing.

The plant materials of this clover we offer, come from beds which have been treated with inoculant.

## ***SPECIAL PACKET COLLECTIONS OF SEED***

**Something in Bloom All Season**

### **I. NECTAR LEGUME FORAGE CROPS**

(For you to get acquainted with a variety of forage crops which are good for bees.)

6 liberal packets of seed for \$1.00, postpaid.

One packet each of Birdsfoot Trefoil, Sainfoin, Hairy Vetch, Hubam (Annual) Sweet Clover, Common Sweet Clover, Madrid Sweet Clover.

### **II. BEE GARDEN COLLECTION**

Color and nectar in your flower border.

5 packets unusual seed for \$1.00, postpaid.

One packet each of Anise Hyssop, Meadow Sage, Purple Loosestrife, Garden Hyssop and Jerusalem Sage.

### **III. NECTAR PLANTS FOR UNUSED CORNERS**

(Also of interest in the garden.)

Seed of 6 outstanding honey plants for \$1.00, postpaid.

One packet each of Golden Honey Plant, Borage, Catnip, Motherwort, Phacelia, Chapman Honey Plant.

***All three collections for \$2.75, postpaid.***

# Trees and Shrubs

## VITEX

(*Vitex negundo incisa*)

Exceptional Honey Plant Flowers First Year.

Blooms "Sunup 'til sundown, mid-summer 'til frost."

Shrub Border—Hedge or Screen—a multipurpose plant.

This unusual shrub or small tree is a pretty one with deeply cut leaves and many flowers. It begins blooming at an early age, often the first year from seed, with lavender-blue flowers on terminal spikes. Among the very best of honey plants it furnishes abundant bloom which the bees work freely beginning in mid-summer and often lasting until after frost here; we have also reports from states south of here relating bees working *Vitex* from sun-up 'til sun-down until in October or 1st of November.

*Vitex negundo incisa* grows over a wide range of soils and climate. Once established it is reasonably drowth resistant and long lived. It appears best suited to climate southward of central Missouri and southern New England. It is root hardy some north of that range. In the north the stems often winterkill but the roots send up new shoots which flower the same year. In the south, the plants grow to fifteen feet in height. Can be planted singly; or closely for high hedge or wind-break.

Seed: per packet 35c; ounce \$1.00; ¼ lb. \$3.00; postpaid.

We offer strong one year plants which in our experience transplant better than older plants of *Vitex*.

Plants, 4 for \$2.50; 12 for \$5.00; 25 for \$9.00; postpaid. Write for quantity price.

## BEE BEE TREE

(*Evodia daniellii*)

TRY THIS PROMISING NEW NECTAR PRODUCER.

This fast growing small to medium size tree shows much promise as a nectar producer. Native to North China and Korea, it has not until recently been planted much in this country. In the East it is reported winter hardy as far north as Pennsylvania and Boston, Massachusetts. Blooming for over three weeks (July-August) with small whitish flowers in clusters ten inches across, it attracts bees in large numbers constantly humming over the flowers. Fast growing, a tree in the East is reported at eighteen feet within four years from the time it was set out as a seedling. It is hoped that BEE BEE TREE will prove a valuable addition to your tree plantings and bee pasture.

Heavy 2 to 3 ft. plants, 2 for \$2.50; 6 for \$5.00; postpaid.

## PEA TREE

(*Caragana arborescens*)

A shrub or small tree having light green foliage and clusters of bright yellow pea-shaped flowers. It is very hardy and is drowth resistant. It is good for individual planting or plant 3 to 4 feet apart for hedge. It is a free bloomer and the pea like blossoms yield

an abundant supply of well flavored honey in the spring. Bees fairly swarm over the flowers.

18 to 24 inch seedlings, 8 for \$2.00; 25 for \$5.00; postpaid.

### BEAUTY BUSH

(*Kolkwitzia amabilis*)

Outstanding ornamental, flowering very heavily for an extended period late May and into June. Bees visit the flowers freely. Is tops in ornamental shrub for yard or high hedge. Grows to nine feet tall.

Select 18 to 24 inch plants, each \$1.50; 3 for \$4.00; postpaid.

### TATARIAN HONEYSUCKLE

(*Lonicera tatarica*)

A shrub with masses of attractive flowers in early spring followed by bright red berries liked by birds. It grows to eight feet tall and is very good where a quick growing, tall growing, flowering shrub is desired for individual planting, high hedge or screen. It is very hardy and will grow on almost any soil in sun or partial shade.

Very rich in nectar, as indicated by the name, this is one of the best early season bee plants. In our locality it blooms in May.

Plants: 18 to 24 inches, well rooted, hedging grade, 3 for \$1.60; 12 for \$5.50; postpaid.

### PEKING COTONEASTER

(*Cotoneaster acutifolia*)

Hardy tall growing shrub with glossy dark green foliage. The very numerous, inconspicuous flowers are swarming with bees for weeks in late spring. Apparently among the best of honey plants. The branches very heavily laden with fruits lasting in winter, appear valuable for wildlife. Plant singly for specimens or valuable for massing or hedging shrub.

Large 2 to 3 ft. plants, each \$1.35; 3 for \$3.50; postpaid.

### BITTERSWEET

(*Celastrus scandens*)

Our native American Bittersweet is a vine or climbing shrub noted for the bright orange and scarlet colored seed clusters which are much sought for winter bouquets. Good for trellis or arbor or border fence. The flowers are freely visited by bees.

Well rooted plants or divisions, 3 for \$2.50; 12 for \$7.50; postpaid.

*The bright orange colored berries later crack open to a bright scarlet.*

**DISTANCE FOR PLANTING:** For close windbreak or screen, space Vitex, Pea Tree, Beauty Bush, Cotoneaster and Honey Suckle three to four feet apart. The above are suggested spacing in the rows when a close windbreak, screen or high hedge is desired. If you wish the individual plants to develop fully, then a much wider spacing should be allowed.

# Unusual Perennials

*Selected for Unusual Attraction, Hardiness and Nectar*

Each with its distinctive attractiveness as attributed to the unusual and to wild flowers. These are hardy perennials of the kind which will largely take care of themselves in their respective environments. The best we can find in perennial honey plants.

## ANISE HYSOP

(*Agastache anethiodora*)

**WONDER HONEY PLANT ATTRACTS BEES** by the thousands.

**LONG PERIOD OF BLOOM**—the flowers of Anise Hyssop are visited by the bees so eagerly over a long period in many localities, it has been termed "Wonder Honey Plant." Where it does well it furnishes an abundance of bloom beginning early in June, blooming freely usually for two to three months and with some bloom lasting until frost. As soon as it is daylight in the morning until twilight in the evening, we find the bees working Anise Hyssop.

Anise Hyssop was a native plant in pioneer days in Iowa and northward where it grew around woodland borders. An enthusiastic pioneer horticulturist estimated that an acre of Anise Hyssop, well established, would be pasturage for 100 colonies of bees. Though the plant has nearly disappeared from our native flora, in most places it will grow in cultivated garden and in favorable situations will naturalize. The small seed requires moist conditions for germination; plants bloom first year from seed. Perennial to four feet tall.

Seed, packet, 35c; postpaid.

One year plants, 6 for \$1.00; 2 dozen for \$3.00; postpaid.

## MOUNTAIN MINT

(*Pycnathemum pilosum*)

*Massive bloom of Mountain Mint*

For the unusual amount of bloom per plant and the very pronounced minty flavor of the leaves, you will like this perennial in your garden or borders. It blooms heavily for a long period, beginning mid-summer. The flowers are very attractive to the bees and an abundant source of nectar. This plant is noted for the large amount of mint oil contained in the leaves and flower heads. Grows to three feet in height. Will grow in sun or partial shade.

Seed, packet 25c; postpaid.

Plants, 3 for \$1.50; postpaid.

## MEADOW SAGE

(*Salvia pratensis*)

THE ABUNDANT PURPLE FLOWERS are a beautiful sight in spring when there is not yet much in bloom in the flower garden. We find this perennial easy to grow, long lived and drought resistant. It stands reasonable competition and spreads slowly from self seeding. It grows close to the ground except in blooming stage when the flowering stems reach a height of two feet. Weeds can be mowed over it without injury to the Meadow Sage. Ideal for borders and naturalizing and you will like a row of it in your garden.

The flowers of Meadow Sage are humming with bees and provide good bee pasture for several weeks at a time when forage is scarce.

Seed per packet, 25c; postpaid.

Plants, 5 for \$1.00; 20 for \$3.00; postpaid.

## GARDEN SAGE

(*Salvia officinalis*)

The garden sage has been cultivated for centuries for its aromatic leaves which are used in flavoring foods. It is a long lived perennial and should be included in every garden. The flowers are attractive to bees and a high quality honey is gathered from garden sage. Blooms in June.

Seed, packet, 25c; ounce, \$1.00; postpaid.

## PURPLE LOOSESTRIFE

(*Lythrum salicaria*)

AN IDEAL HONEY PLANT FOR YOUR FLOWER BORDER.

PURPLE FLOWERS on long spikes in late summer and fall. A nice ornamental growing to three feet or taller. Very good for flower gardens, hardy perennial, adapted to most soils, grows especially well in very moist situations.

Purple loosestrife blooms over a long period and the flowers are very heavily worked by bees.

The plant is especially adapted to moist or boggy land and under these conditions has naturalized readily in some localities. It is reported as a major source of nectar where sufficiently plentiful.

The seed is tiny, with a very large number of seeds per ounce.

Seed, packet, 25c; ounce \$1.00; ¼ pound, \$3.00; postpaid.

Plants, 4 for \$1.00; postpaid.

## WILD INDIGO

(*Baptisa australis*)

Attractive in foliage and flower, grows into a stately clump three feet tall. Dozens of stalks arise from a single root of a well established plant with large clusters of blue pea-like flowers in June. Long-lived and hardy, very attractive to the bees.

One year plants, 6 for \$1.00; 2 dozen \$3.00; postpaid.

**VIRGINIA WATERLEAF**  
(*Hydrophyllum virginicum*)

This is an attractive perennial to naturalize in shady situations. An herb with many white or purple flowers following fruit bloom. Of simple culture if given a partly shaded place in the wild garden, preferably rich woods soil. Reported from Quebec to South Carolina and westward to Kansas. Growing throughout the

Pellett Memorial Preserve, it fairly covers the area in late spring and blooms abundantly to fifteen inches in height. Bees are most eager for the flowers, visiting them in large numbers during the extended blooming period. A valuable honey plant for apiaries in the vicinity of woodlands.

Plant divisions, 6 for \$1.50; 2 dozen for \$4.50; postpaid.

**GARDEN HYSSOP**  
(*Hyssopus officinalis*)

Stocky thick growth to two feet tall. Numerous blue flowers not showy but ornamental in mass. Usually swarming with bees for weeks, June to September. Not to be confused with either Anise Hyssop or Giant Hyssop as it is an entirely different plant. Makes nice border.

Seed, per packet, 25c; postpaid.

Plants or divisions, 5 for \$1.00; 20 for \$3.00; postpaid.

**CATNIP OR CATMINT**  
(*Nepeta cataria*)

This best known member of the Catnip family blooms over a long period, beginning in mid-summer. It is very rich in nectar and attracts the bees in large numbers. It is perennial, easy to grow and one of the very best of honey plants for naturalizing in waste places. This plant was common to herb gardens of pioneer days, grows three feet tall.

Seed, packet, 15c; ounce \$1.00; postpaid.

**NEPETA GRANDIFLORA**, with wide spreading growth and intermittent bloom most of the summer through early fall makes a very attractive planting for the right locations. To two feet tall. Easy to grow, needs plenty of room. Flowers rich in nectar and usually humming with bees.

Seed, packet, 25c.

One year plants, 5 for \$1.00; 20 for \$3.00; postpaid.

## JERUSALEM SAGE

(*Phlomis tuberosa*)

Showy member of the mint family, flowers to a height of four feet. Well suited for background planting. Easy to grow. Blooms heavily in mid-summer, very attractive to the bees. Flowers, lavender.

Seed, per packet, 35c; postpaid.

## CHAPMAN HONEY PLANT

(*Echinops sphaerocephalus*)

Chapman Honey Plant, also known as Globe Thistle, once enjoyed a real boom among the bee-keepers. It blooms heavily in mid-summer and the bees visit the flowers in large numbers. The globe-shaped flowers are grown for ornament. The plant is biennial and reaches a height of six feet; easily grown, can be planted either spring or early fall.

Seed per packet, 25c; per ounce, \$1.00; postpaid.

*The Echinops have globe-shaped flowers*

## ECHINOPS RITRO

The blue flowered Chapman Honey Plant is perennial, growing to a height of about four feet on our soil. It is not nearly so tall as the other variety but is more desirable as an ornamental. It comes into bloom somewhat later and lasts into September.

Seed, per packet, 25c; postpaid.

## WILD MARJORAM

(*Origanum vulgare*)

Wild Marjoram blooms over a long period, beginning in midsummer and is a favorite of the honey-bee. It is an attractive perennial, growing 1½ to two feet tall. It is a European plant cultivated in gardens and naturalizes readily under right conditions in this country. You will like it in your garden.

Seed, packet, 35c; postpaid.

Plants, 4 for \$1.50; postpaid.

## GOLDEN HONEY PLANT

(*Actinomeris alternifolia*)

Golden Honey Plant, also known as Wingstem or Crownbeard, is one of the best native honey plants of the Mississippi valley. Where this plant is plentiful the bee-keeper need never worry about abundant stores for winter. It is a rather coarse perennial about five feet tall with irregular yellow flowers. It blooms in August and never fails to find bees working it. It will grow in either sun or partial shade; does best in

sheltered situations such as partly wooded areas or woodland borders. Once started in favorable environment, it will gradually spread around. It is often found growing in sparse timber along streams.

*Bees Working Golden Honey Plant*

Seed, per packet, 25c; postpaid.

One year plants or divisions, 6 for \$1.00; 2 dozen for \$3.00; postpaid.

### **SIMPSON'S HONEY PLANT** (*Scrophularia marilandica*)

Simpson's Honey Plant also commonly known as Figwort, has long been famous for its rich store of nectar for the bees. The flowers are small but abundant and rich in honey. The plant is perennial and grows from three to six feet high. It will grow in either sun or shade and is often found growing wild in wooded areas. It blooms in the fall.

Seed, per packet, 25c postpaid.

### **ASTER**

The wild asters are the last source of nectar in many localities. We offer a mixture of several of the most ornamental varieties, including New England Aster and Arrow Leaf Aster. All are worthy of a place in the garden. Perennial.

Seed, per packet, 25c postpaid.

### **NEW ENGLAND ASTER.**

probably the most showy of the wild asters; grows to four or five feet tall and blooms in the fall with showy purple flowers.

Divisions: 3 for \$1.00; 12 for \$3.00; postpaid.

### **MOTHERWORT** (*Leonurus cardiaca*)

Motherwort blooms over a long period beginning in summer and sometimes continuing to late in the fall. It is an abundant source of nectar and the bees are attracted to it in large numbers. This perennial, native of Asia, has become naturalized in many American localities. It is easily raised from seed and once established, should remain with little attention for many years. Grows two to four feet tall. One of the best of honey plants to naturalize in waste places for bee pasture.

Seed, packet, 25c; postpaid.

# Annuals

## PHACELIA

The fiddle neck phacelia (*Phacelia tenacetifolia*) is an annual of easy culture and the flowers are covered with bees from morning till night. This plant is native to California but has been widely cultivated in European gardens as a honey plant, also grown to some extent for forage. It reaches a height of about two feet, with blueish or pink flowers. A famous bee plant.

Seed, packet, 25c; postpaid.

## CALIFORNIA POPPY

Brilliant orange BLOOMS THROUGHOUT SUMMER.

The California poppy is a familiar plant to those who have visited the West Coast in springtime. In the East it is grown as an annual. It reseeds freely and is easily grown in gardens or naturalized in sunny situations. The bees visit the flowers in large numbers for pollen. It blooms over a long period.

Seed, per packet, 15c; ounce, 75c; postpaid.

## BORAGE

Borage has long been famous as a bee plant and has been much planted in European honey plant gardens. It is an annual native to Europe and North Africa.

Although the honey is dark and not of the best quality, the bees visit the flowers so freely that it should be included in every extensive collection of honey plants. It is a hardy plant, blooming for a long period.

Seed, per packet, 15c; ounce, 75c; postpaid.

## MIGNONETTE

(*Reseda odorata*)

Mignonette has long been a favorite with those who have bee gardens. The bloom is very fragrant. Some very extravagant claims have been made as to the amount of honey to be secured from this source. While there is no proof that such yields can be secured, the flowers are very attractive to the bees and it seems probable that if enough of it were available good crops might be harvested. Try it in your garden.

Seed, per packet, 15c; ounce, 75c; postpaid.

## SAFFLOWER

Safflower is a fast growing annual which reaches a height of about three feet. The large yellow flowers are of interest in the garden but it is cultivated principally as a source of drying oil in demand by the paint and varnish industry. Bees visit the flowers freely and indications are that it will prove to be a good honey plant.

Seed per packet, 15c; postpaid.

## GOLDEN CLEOME

(*Cleome lutea*)

Golden Cleome or Yellow Spider Flower makes a large growing ornamental in one season growth. Though native to a dry region (the Southwest), this annual proves worthy of garden cultivation in our more humid climate. Given cultivation and plenty of room, it reaches a height up to six or seven feet and blooms from July until frost with a constantly increasing number of flower clusters. It is ideal for background, self sows freely. Although this may not be true in all localities, we find it one of the finest of honey plants, very attractive to bees and other insects, continuing well into the fall when there is not much other bee forage.

Seed, per packet, 25c; per ounce \$1.00; postpaid.

---

## Books

*By the Late Frank C. Pellett*

### ***A Living From Bees***

A cloth bound book of 335 pages, well illustrated which, as its title suggests, outlines proved methods of making a living from bees. The fundamentals of honey producing are explained, with reasons for every necessary manipulation.

Conditions under which beekeeping is practical as an exclusive business and when it is better to be followed as a sideline are discussed at length. \$4.00, postpaid.

### ***How to Attract Birds***

This little book of 156 pages, fully illustrated with the author's photographs, is an account of forty years' experience with wild birds in several localities. Suggestions for attracting birds by means of providing nest boxes, storm shelters, watering and feeding stations and providing suitable surroundings are helpful in any situation. \$2.50, postpaid.

### ***Success with Wild Flowers***

An account of the author's forty years' experience in growing wild flowers in a five acre preserve. Illustrated with numerous photographs and color plates.

Cloth bound, 175 pages, \$2.50 postpaid.

*All for Only \$5.00, Postpaid*

### PLEASE READ BEFORE ORDERING:

We try to send out only good seeds and plants and we use much care to keep our varieties pure and true to name. However, since results also depend on such factors as soils, climates, weather, knowledge and skill of the purchaser, etc., over which we have no control, we cannot in any way be responsible for the crop. It is mutually agreed that our liability in any instance is limited to the amount actually paid us for seeds or plants. PELLETT GARDENS, Atlantic, Iowa.

**Safe Arrival Guaranteed.** Parcel post shipments we either insure or guarantee (to the extent of the purchase price) safe arrival anywhere in the U. S. A. Trees and plants are guaranteed to arrive in good growable condition, provided shipment is ordered within our stated shipping season. We cannot guarantee results as that depends upon circumstances beyond our control. Plants we offer will be well packed for shipping. Any claims should be made within ten days from receipt of order.

**ALL ITEMS ARE OFFERED** subject to availability. Refunds made for items sold out, as soon as this is known.

### MINIMUM ORDER:

Please do not order less than seeds totaling \$1.00 or plants totaling \$3.00 or more for shipment at one time. Due to packing and mailing costs, smaller orders are handled at a loss and we reserve the right to refuse orders smaller than these amounts.

### HOW TO REMIT:

Remit by check or money order. Currency remittances at your own risk.

### SHIPPING SEASON:

**SEEDS:** Year around.

### PLANTS AND TREES:

Late fall (after freeze when plants become dormant) through winter and spring, closing late May. Refrigerated storage facilities enable us to make shipments south during winter and to hold stock dormant in spring months.

### FALL ORDERS:

You may use this catalogue for fall orders. We expect to have most items at the same prices. If prices have risen on any item you order, we will advise before shipping.
